9.  Other \_\_\_\_\_.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Warren E. Olsen on July 17, 2009. This application has been amended as follows:

In claim 1, line 4 delete "that is a synergistic combination" .

In claim 1, line 7 after acceptable additives insert – ,wherein the ratio of CA and PCQ in the composition ranges from 1:1 to 1:10 -- .

Delete Claims 5, 8-9, 11-12, 14-15.

The following is an examiner's statement of reasons for allowance:

The method as claimed are found to be patentable over the prior art because the prior art does not teach or fairly suggest the treatment of acute and chronic myeloid leukemia (AML & CML) and lymphoid leukemia, in a mammal, in order to obtain a percentage growth inhibition of at least one of promonocyte cells, Erythroleukemia cells, or CML's leukemic cells, said method comprising administering a pharmaceutical composition consisting essentially of a pharmaceutically effective amount of chlorogenic acid (CA) and 3-O- p-Coumaryl quinic acid (PCQ) isolated from any plant parts of Piper betel or any other source, optionally along with pharmaceutically acceptable additives, wherein the ratio of CA and PCQ in the composition ranges from 1:1 to 1:10.

The closest prior arts of record, namely Kuroda et al. (Mutation Research/Reviews in Mutation Research Volume 436, Issue 1, January 1999, Pages

69-97) and Yang et al. (Drug Metabolism Reviews, Volume 33, Issue 3 & 4 December 2001 , pages 237 – 253), teach “the antimutagenic activity against various mutagens of tea extracts [green and black teas] and polyphenols including ECG and EGCG has been demonstrated in microbial systems *Salmonella typhimurium* and *Escherichia coli*, mammalian cell systems and in vivo animal tests. The anticarcinogenic activity of tea phenols has been shown in experimental animals such as rats and mice, in transplantable tumors, carcinogen-induced tumors in digestive organs, mammary glands, hepatocarcinomas, lung cancers, skin tumors, leukemia, tumor promotion and metastasis;” and Yang et al. teaches polyphenols of black and green teas are inclusive of chlorogenic acid and quinic acid. Such teas are useful in prevention of carcinogenesis but the prior art does not teach treatment of acute and chronic myeloid leukemia (AML & CML) and lymphoid leukemia, in a mammal, in order to obtain a percentage growth inhibition of at least one of promonocyte cells, Erythroleukemia cells, or CML's leukemic cells, said method comprising administering a pharmaceutical composition that is a synergistic combination consisting essentially of a pharmaceutically effective amount of chlorogenic acid (CA) and 3-0- p-Coumaryl quinic acid (PCQ) isolated from any plant parts of *Piper betel* or any other source, optionally along with pharmaceutically acceptable additives. Moreover, Table 3 of the specification describes the unexpected synergistic properties exhibited upon administration of a combination of chlorogenic acid (CA) and 3-0- p-Coumaryl quinic acid (PCQ).

Accordingly, as the prior art does not teach or suggest the methods as claimed, the claims are found to patentable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Layla Soroush whose telephone number is (571)272-5008. The examiner can normally be reached on 8:30a.m.-5:00p.m..
